

NIST TRACEABLE PRODUCTS

LABORT[®]
Laboratory & Fine Chemicals

Our Volumetric reference standards are of highest purity. These standards are analysed against original NIST standard reference materials. This gives confidence to our customers in their day to day laboratory analyses. Each of the material is provided with a Certificate of Analysis and the batch number.

Product Code	Description	Size	INR
45950	Benzoic Acid Volumetric standard, secondary reference material for acidimetric titration, traceable to NIST standard reference material.	50 g	12750.00
45938	Oxalic Acid Volumetric standard, secondary reference material for acidimetric titration, traceable to NIST standard reference material.	50 g	51400.00
45392	Potassium Dichromate Volumetric standard, Secondary reference material for redox titration, traceable to NIST standard reference material.	80 g	12300.00
43881	Potassium Hydrogen Phthalate Volumetric standard, Secondary reference material for acidimetric titration, traceable to NIST standard reference material.	80 g	14030.00
45670	Potassium Hydrogen Phthalate Secondary reference material for pH measurement, traceable to NIST primary standard reference material.	25 g	22400.00
45435	Sodium Carbonate Anhydrous Volumetric standard, Secondary reference material for acidimetric titration, traceable to NIST standard reference material.	80 g	15600.00
45851	Sodium Chloride Volumetric standard, Secondary reference material for argentometric titration, traceable to NIST standard reference material.	100 g	15600.00
45554	Di Sodium Oxalate Secondary reference material for redox titration, traceable to NIST standard reference material.	50 g	18500.00
46168	Di Sodium Tetraborate Decahydrate, Secondary reference material for pH measurement, traceable to NIST primary standard reference material.	25 g	22500.00
